

Regulator brief — labour & AI-economy indices remain UNMEASURED

Not a compliance determination. Scores are never sold. Regulators verify free forever (HO.2).

Honesty rule: empty product cells are intentional. Absence is not zero — do not treat Hub experiment files as permission to invent MEASURED labour scores.

WHAT WE PUBLISH TODAY

SURFACE	REGISTER	MEASURED_SCORE
GSPC scoreboard (GET /api/gspc)	MEASURED · 13 of 14 axes	Per-axis, signed Ed25519
AI Economy Index	UNMEASURED	null
Human Labour Index	UNMEASURED	null
Humanoid Labour Index	UNMEASURED	null

Catalog API: GET /api/indices — register: UNMEASURED, all scores null.

WHAT WE REFUSE

- Invent wage %, displacement %, TVL, or TAM as MEASURED labour/economy scores.
- Fuse index numbers into GSPC grading cells.
- Certify compliance, issue badges, or sell grades.

WHY EMPTY CELLS ARE HONEST

Until INDEX-METHOD-0.1 freezes an input bank and usable n, the product stays UNMEASURED. Contextual citations may appear as REPORTED labels only — never as MEASURED inputs.

VERIFY WITHOUT AN ACCOUNT

- Board: /gspc-scoreboard · offline recompute: /gspc-verify
- Indices hub: /indices
- Corrections (append-only): GET /api/corrections

HUB VS PRODUCT HONESTY

Some Hugging Face csoai/* experiment files may label MEASURED-INDEX-v0.1. The Council OS product surface remains UNMEASURED. See correction C-2026-0826-01.
